

## **Phase 7: Integration & External Access**

### **1. Named Credentials**

Simplify authentication when connecting Salesforce to external systems.

### **2. External Services**

Allow Salesforce to connect to external APIs declaratively.

### **3. Web Services (REST & SOAP)**

Used for data exchange between Salesforce and external applications.

### **4. Callouts**

Apex or Flow can invoke external services using HTTP callouts.

### **5. Platform Events**

Enable real-time messaging between Salesforce and external systems.

### **6. Change Data Capture**

Tracks record changes in real time for synchronization.

### **7. OAuth & Security**

Ensures secure authentication and authorization for integrations.
