Phase 6: User Interface Development

1. Lightning App Builder

Used to create and customize App Pages, Record Pages, and Home Pages using drag-and-drop components.

2. Record Pages

Customize record layouts to show relevant fields, related lists, and charts.

3. Tabs

Tabs organize standard and custom objects within Lightning Apps.

4. Home Page Layouts

Home pages display dashboards, reports, tasks, and recent records for users.

5. Utility Bar

Provides quick access tools like flows, reports, and custom components.

6. Lightning Web Components (LWC)

Modern UI framework using HTML, JavaScript, and CSS.

7. Apex Integration with LWC

Apex methods are used to fetch and update data from LWC components.

8. Navigation Service

Used to navigate programmatically between Salesforce pages.
